

Zapper LongReach™

**Laser-like Distance Barcode Scanning
...at a CCD price**

Optional Hands-Free Stand

The Zapper LongReach Linear Imager preserves the interface flexibility of our popular Barcode Zapper range. Just click in different low cost Adaptor Cables to move from PC Keyboard to RS232, to USB, to MAC, to Notebook.

But with a scanning distance of up to 200mm, its also ready to compete against Laser Scanners

The LongReach is a "Linear Imager", taking reliable solid state CCD technology to the next level. Using highly integrated electronics to tightly control sensitive optics, light source and digitising circuitry, the LongReach produces performance once only available from lasers.

The bright red beam makes alignment to a barcode easy. The ergonomic shape fits easily into the hand. Yet your hand won't need to bring much money from your pocket when you invest in a Zapper LongReach!

As a distance Scanner you don't need to get the LongReach close to the barcode to be read. You can even use the optional Hands-Free Stand to simplify the scanning process.
