

ComplianceVault

Email Archiving and Retrieval Appliance

Email archiving is the primary email management challenge facing businesses today. The ComplianceVault™ from Intradyn captures all of an organisation's email on a continuous basis, providing an indexed searchable database, as well as an industry standard WORM (write-once, read-many) archive.

Many small to medium organisations have not yet been able to gain control over email archiving because of the complexity and high costs involved. That's why the ComplianceVault™ Email Archiving & Retrieval Appliance from Intradyn was designed to be both affordable and extremely simple to use. Requiring no integration of hardware and software, and *no disruption to existing IT infrastructure*, it's a complete, drop-in solution: a plug-and-play, purpose-built network appliance with a Web interface, ready to run right out of the box.

ComplianceVault is a completely integrated hardware-software solution that captures all of an organisation's email on a continuous basis, from a virtually unlimited number of mailboxes. It requires minimal integration time or expense and has extensive searching and reporting capabilities.

The screenshot displays the ComplianceVault web interface. On the left is a navigation menu with items like Home Page, Email Search, System Security, etc. The main area shows the 'Enter Email Search Criteria' form with fields for Start Date, End Date, Email From, Email To, Subject, and Search Text. Below the form is a 'Search' button. A separate window shows the search results table.

Product Description

The device is available in a number of models, starting from a 120GB standalone up to a rack-mounted appliance with internal disk capacity of 1TB. Each model archives all email onto non-alterable WORM tape.

ComplianceVault Features

- Captures all inbound, outbound and internal emails
- Attachments are stored once only – no duplication and wasted storage space
- Works with a range of email systems (e.g. Microsoft Exchange, Lotus Notes, virtually any IMAP or POP3 system)
- Email messages automatically saved to WORM storage
- User-friendly, web-based search front end – users can retrieve their own emails, administrators can access all emails
- Search quickly and efficiently by all email fields, including full text
- Emails can be “exported” back to the user’s desktop, printed or emailed
- User mailboxes can be reduced in size, reducing network storage requirements
- WORM storage provides compliance with regulatory standards for retention of email records
- Offers 256-bit encryption applied to tape – the kind of “strong encryption” normally associated with high-end tools
- Meets key email regulatory requirements in a single platform
