

How easy can a barcode reader be?

Suffering technological overload? New products, new procedures, always more to learn?

Meet the Barcode Reader designed to minimise this overload. A truly simple to use Australian designed product backed up by friendly support staff. ASP's new Z4 Data Traq is the latest generation of our popular range of Portable Barcode Readers, and can do some really clever things, quite simply.

automatic, simple, perfect.

2 Barcode Readers in 1

POWER & VERSATILITY AT A SHARP PRICE.

The DataTraq is the latest generation of ASP's popular Portable Barcode Reader, retaining the previous model's ability to operate both as a fixed Reader and a Portable, but now adding the programming power of ASP BASIC.

From the moment you turn it on the unit is ready to begin scanning barcodes at say a point of sale or library borrowing desk. But optionally you can let a program written in the powerful in-built ASP BASIC language guide operators through their tasks, making use even easier. Like before, instead of buying another product just for stocktakes or other mobile uses, the DataTraq is easily disconnected for portable use.

CHOOSE YOUR SCANNER.

You can match the performance of a DataTraq to YOUR needs by choosing the most appropriate Scanner. Plug in anything from an ASP Wand, through ASP's Barcode Zapper CCD range, or even an ASP Laser Gun; the DataTraq is engineered to handle them all. (ASP or your Dealer will be happy to advise on the most appropriate choice).

MULTIPLE INTERFACE STANDARDS.

With PC Keyboard Emulation, RS232 and RS232 Wedge interfaces built into its Homebase, the DataTraq connects to practically anything.

AUTOMATIC RECHARGING.

And while connected to the Homebase the inbuilt batteries are automatically recharged. Much better than dusting off a less versatile Portable for a stocktake only to find it has flat batteries - and you've forgotten how to use it!

FREE PROGRAMS.

You don't even need to know anything about programming to get the benefits of application programs. ASP has a growing library of free application programs, or will write custom applications at low cost. Programs can be supplied "attached" to a loader program, making transfer from your PC to the DataTraq a snap.

WRITE YOUR OWN PROGRAMS.

For those who want to write their own programs, ASP BASIC is very well documented, and applications are simply written with an editor on the PC before being transferred. All you need is our low cost Programmer's Pak and the right transfer cable. Optional modem operation extensions and ASP's central dial-in program allow straightforward structure of sophisticated field applications.

AND THERE'S MORE.

With big keys and a large, friendly clear display, you always know what's going on. In harsh environments, a tailored leather case is available to further protect the unit. In fixed use an automatic audit trail of scans is stored.

The DataTraq comes with a 2 year warranty, and is certified under Australia's Radio Frequency Emission Testing Standard ("C-Tick"). Units with clock/calendars are Y2k compliant.

Technical Specifications

Weight:	400g (Reader)
Display:	2 x 16 character LCD
Keypad:	Rugged, moisture resistant, responsive keys
Program:	Inbuilt Interpreter ASP BASIC
Memory:	Standard 32K, options: 128K, 256K, 512K
Barcodes:	Code 39, 128, 93, UPC/EAN, Int 2 of 5, ITF 14, Codabar, Full Ascii 39, ISBN extraction
Input:	ASP Wand/2000, ASP Barcode Zapper CCD Touch Scanner, ASP Laser Gun
Power:	Internal rechargeable ni-cad batteries and lithium cell data backup
Homebase Interfaces:	PC/AT/PS2 Keyboard Emulation, RS232, RS232 Wedge for Terminals (add Y cable)
Options:	Programmer's Pak, Cables, Leather Case, Clock/Calendar, Modem Extensions
