

Inmagic DB/Text WebPublisher PRO (non-SQL) v13		
Server Requirements		
Microsoft ASP.NET 3.5 SP1		
The ASP (Application Development) Module of IIS must be installed for WebPublisher PRO to be able to save edits. If this module is installed, the <"Web Server"> ISAPI and CGI Restrictions will include Active Server Pages with Restriction set to Allowed.		
Microsoft X+A1ML Core Services 4.0 SP2 (will be installed if not already present)		
ISAPI (recommended) or CGI		
Do not install WebPublisher PRO on a server hosting SharePoint.		
Supported Operating Systems	IIS	Notes
Windows Server 2008 SP2 (32-bit or 64-bit)	IIS 7.0	<ul style="list-style-type: none"> • IIS 6 compatibility (subcomponent of IIS 7) required • ISAPI is required for editing records. If you use CGI, the CGI extension must be installed, and editing is not supported. • IIS 7.0 WindowsAuthenticationModule and/or BasicAuthenticationModule must be installed before WebPublisher PRO if you will use Windows (Single Sign On) or Basic authentication to access the website. See http://technet.microsoft.com/en-us/library/cc733010(WS.10).aspx.
Windows Server 2008 R2 (64-bit)	IIS 7.0	<ul style="list-style-type: none"> • Same as above
Windows Server 2003 with SP1 or later (32-bit)	IIS 6.0	<ul style="list-style-type: none"> • Deprecated (currently supported, but we expect to remove or end support in the future)
Windows Server 2003 R2 (64-bit)	IIS 6.0	<ul style="list-style-type: none"> • Deprecated (currently supported, but we expect to remove or end support in the future) • 32-bit application pools must be enabled on IIS. • For help on getting the .NET framework to work, see http://support.microsoft.com/kb/911720.
