

Maxus Library

Maxus Library is designed for Australian special libraries and provides a ready to use system for cataloguing, borrower management, serials management and circulation of a range of materials. Books, journal articles, journals, electronic files and URLs can be added to the catalogue.

Maxus Library is designed on the Inmagic® software platform for use with DB/TextWorks®.

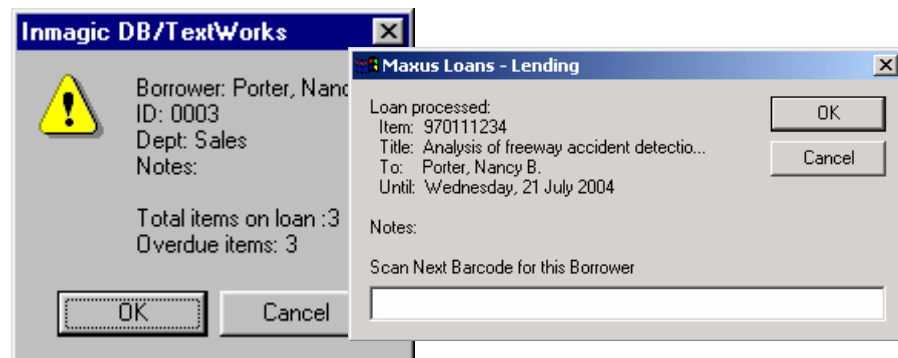

Maxus Library uses menus for easy navigation around the system.

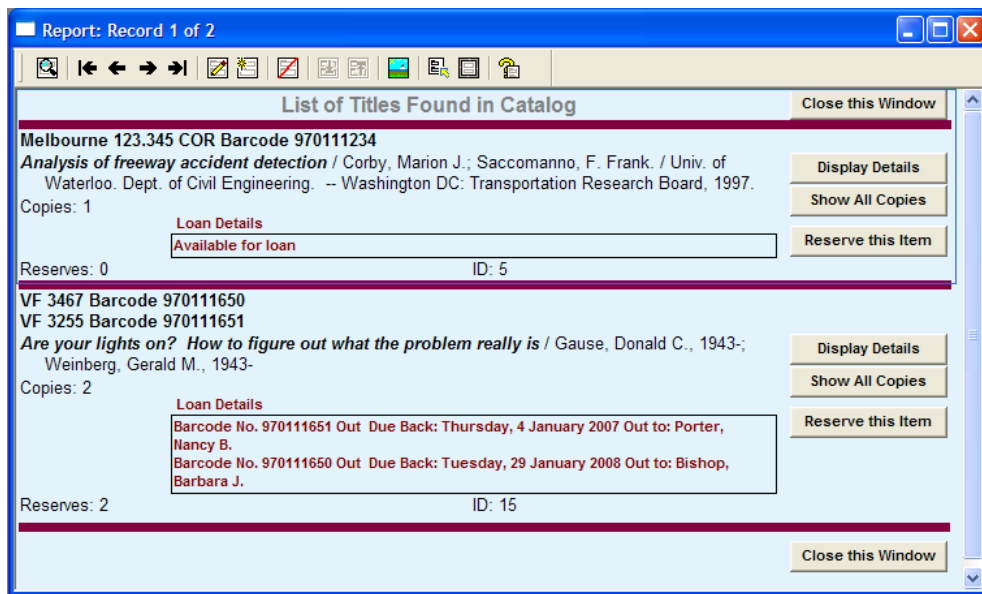

Using barcodes to identify items and borrowers streamlines the circulation processes.

Operators get feedback on Borrower and Item status.

Users can view availability of any item and reserve items that are out on loan.

Summary of Maxus Library Features

- Catalogue, Borrower, Loans, Supplier, Serials and History databases supplied
- Loans Menu with Buttons for Loans, Returns and Renewals
